

M7 & M8 BRIDGE DECK AND INTERCHANGE WORKS

Arkil have recently completed a challenging Re- Surfacing project incorporating 4 Motorway Bridge Decks, two interchange underpasses & two Roundabouts. Works were completed to a very tight schedule including Dayworks & Nightworks. All failed areas were Planed to required depths and reinstated using a combination of Base, Binder & SMA materials to new TII specifications. The Roundabouts to the Interchanges were Surfaced using a 68+ HPSV material, the chip for this material is produced in our Quarry in Kerry. Where required a reinforcing Geogrid was installed.
